Introducing the new Gallant Look

Introducing the New Gallant Look!! Our New Logo

September 1, 2013 marks the beginning of **19 years** in business for Gallant Custom Laboratories. It all began in September 1995 with the incorporation of "Gallant Custom Laboratories Inc.". By November 1995, we had begun production of our first autogenous bacterin at our lab in Guelph, Ontario. Times have changed, from one very busy employee (the President) to a current staff of 12. In 2010, we built two isolation labs for the manufacturing of autogenous viral vaccines and entered a new era of viral isolation and vaccine production. In 2011, we made our first Swine Influenza autogenous vaccine and have become proficient in real-time PCR detection of H3N2 and H1N1 from samples, followed by isolation of the virus.

We now set our sights on poultry viral vaccines.

2013 marked the beginning of swine Mycoplasma autogenous bacterin production as we developed the methods to successfully propagate fastidious swine Mycoplasma strains for the purpose of antigen manufacturing.

To complement the changes in the business, we decided our logo needed a more modern look. The business has changed and modernized and so should the image. The microscope is still with us, we have added a second colour (the orange to go along with our viral label colour) and a test tube –cradled in the final "T" of the logo. You will see this new look on all of our labels and packaging.

We have also updated our website to go along with our new image, so check out the new and improved www.gallantcustomlaboratories.com on the web.

We would love to hear from you so let us know what you think!
